CAREER OBJECTIVE

Motivated first-year B.Tech CSE student at the University of Petroleum and Energy Studies, Dehradun, with hands-on experience in AI tools, workflow automation, and programming. Skilled in Python, C, Data Analytics, and Excel. Seeking a Work-From-Home internship in the finance/fintech sector to apply analytical and technical abilities toward financial data analysis, reporting, and process automation — while building domain expertise in capital markets and financial systems.

WORK EXPERIENCE

Computer Engineer Intern *Aug 2025 – Present*

Diksha Foundation | Virtual / Remote

- Learned and applied AI-powered development tools including Cursor IDE for accelerated coding workflows
- Integrated and tested Hugging Face API interfaces for deploying pre-trained NLP and ML models
- Built automated workflows using N8N — a no-code/low-code automation platform — integrating AI models into business pipelines
- Gained practical experience in API-based integrations, data flows, and AI-assisted backend development

EDUCATION

B.Tech – Computer Science & Engineering *2025 – 2029 (Expected)*

University of Petroleum and Energy Studies (UPES), Dehradun | Current CGPA: 7.5 / 10

Senior Secondary (XII) – Science (PCM) *2024*

Delhi Public School, Azaad Nagar, Kanpur | CBSE | 78.60%

Secondary (X) *2022*

Delhi Public School, Azaad Nagar, Kanpur | CBSE | 90.60%

TECHNICAL SKILLS

Programming: Python, C Programming, C++ (Basics)
Data & Analytics: Data Analytics, Microsoft Excel (VLOOKUP, Pivot Tables, Charts), Google Sheets
AI & Automation: Cursor IDE, Hugging Face API, N8N Workflow Automation
Finance Knowledge: Basic Financial Statements, Budgeting Concepts, Capital Markets (Learning)
Other: Robotics, Video Editing, Git & GitHub, MS Office Suite, Report Writing

PROJECTS

Personal Budget Tracker – Python + Excel *2025*

- Built a Python script to read, clean, and analyze monthly expense data from Excel files
- Generated visual expense reports using matplotlib; categorized spending into food, travel, and utilities
- Automated monthly summary emails using smtplib, reducing manual reporting time by ~80%

Stock Price Data Analyzer – Python *2025*

- Fetched real-time stock data using the yfinance library
- Built a comparative analysis tool with moving averages and basic trend detection logic
- Exported results into structured Excel reports with conditional formatting for quick insights

Simple Banking System – C++ *2025*

- Developed a console-based application simulating deposits, withdrawals, and fund transfers
- Implemented account balance tracking, transaction history, and basic interest calculation logic

CERTIFICATIONS & COURSES

- Financial Markets – Yale University, Coursera [In Progress – 2025]
- Excel Skills for Business – Macquarie University, Coursera [2025]
- Python for Everybody – University of Michigan, Coursera [2025]
- NSE Academy: Basics of Capital Markets – NSE India [2025]

ACHIEVEMENTS & EXTRA-CURRICULAR ACTIVITIES

- **Gold Medalist – Math Olympiad (School Level)**
- **2nd Place – Robotics Tournament (School Level)**
- 2nd Place – Coding Competition (School Level)
- School Captain – demonstrated leadership and organizational skills across school activities
- Robotics Club Member – hands-on experience with hardware-software integration and automation
- Contender, School Tech Club – active participation in technology events and competitions
- Solved 50+ problems on HackerRank focusing on data structures & algorithms

LANGUAGES

English (Professional Proficiency) | Hindi (Native)
